

# LIGHT CURTAIN *Repair*

Light curtains are an advanced method of safeguarding personnel around many hazardous machines. They are more efficient than customary measures, such as sliding gates, mechanical barriers, etc. Essentially, they are an active optoelectric device which contains one or more transmitting elements and one or more receiving elements which together form a sensing field.

## **PARAGON Factory procedures for light curtains:**

- Fully test and monitor safety output for control boxes
- Replace any damaged housings
- Replace connectors and damaged end caps
- Replaced damaged transmitter and receiver cables
- Paint damaged housings
