

PARAGON

CRT DISPLAY Retrofit

Now Paragon offers upgrades from your old monitor to brand new LCD display screens.

CRT Displays

Cathode Ray Tube monitors have been around since the invention of the television. They use a ray gun similar to a television to beam a path of electrons on the screen. The most common complaint about CRT's is their weight (usually 15-20 lbs), size and burn-in.

LCD Displays

Liquid Crystal Display technology is the comparative newcomer to the monitor arena. Unlike larger CRT monitors, LCD displays usually weigh in under 10 pounds and themselves are only 3 inches deep.

Benefits of LCD Displays

- No burn-In
- Longer life
- Less power consumption

OLD Factory procedures for CRT Displays:

- Rejuvenate tubes
- Rebuild low voltage power supply
- Test with proper video circuit input signals
- Adjust yoke and electronic controls
- Replace any defective components

NEW Refurbish Procedures for CRT Displays:

- Replace SVGA, VGA and EGA's with LCD display
